

STRUCTURES FOR METAL DIECASTINGS

Feels good.

Structured surfaces on a range of different materials are becoming even more popular on the market. Structures strengthen the feel of a product and heighten the user's perception of its value. The material is perceived as genuine. This trend can also be observed in metal diecast parts. Some product examples are structured knobs for high-end sanitary fittings or designer operating elements for car interiors.

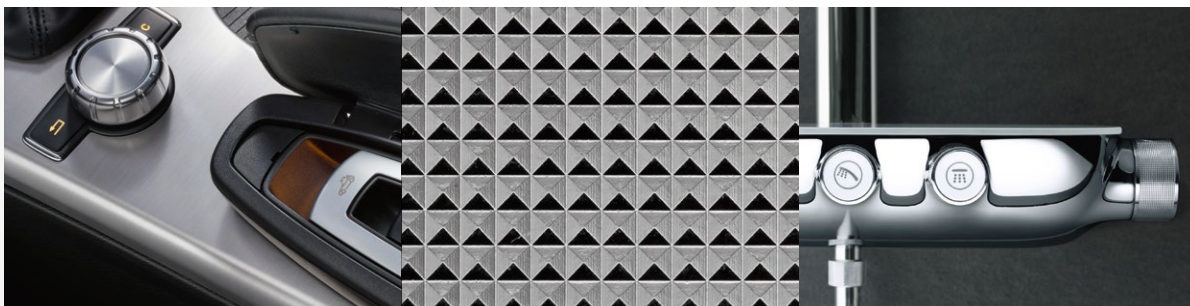

HDO offers a variety of design options for decorative surfaces of metal diecast parts, which can be manufactured using different methods.

For example brushed, blasted or mechanically processed surfaces achieve an increased effect you can feel. In particular off-tool structures are an economically interesting solution for individual and extraordinary structures.

Structured surfaces on your component parts offer you many benefits:

- Increasing the uniqueness and value of the product
- Boosting the products haptic-feel (experiencing metals)
- Differentiation from competitors' products
- Design options according to individual customer requirements
